Controlled Substance Module

The Controlled Substance Management Module includes tools designed to support:

- Early identification of patients at risk for alcohol and substance misuse.
- Tracking and management of patients with known alcohol and opioid use disorders (AUD and OUD).
- Tracking and management of Office Based Opioid Treatment (OBOT).
- Monitoring number of patients with active opioid, treatment medications and or use of Benzodiazepine and opioids.
- Assessing the impact of education and changes to workflow on number of patients with active opioids or in treatment.

Measures:

Measure Name	Description
Alcohol Use Disorder Treatment (AUD)	Patients ordered a medication for alcohol use disorder (AUD).
Opioid Use Disorder Treatment (OUD)	Patients ordered a medication for opioid use disorder (OUD).
Buprenorphine Prescription	Patients with at least one Buprenorphine order provided during the measurement period.
Naltrexone - Injectable Prescription	Patients with at least one Naltrexone Injectable order provided during the measurement period.
Controlled Substance Agreement	Patients who have signed a controlled substance agreement.
Opioid on Med List	Patients with an active opioid medication on medication list.
Opioid and Benzodiazepine	Patients ordered both an Opioid and a Benzodiazepine at the same time.
Benzodiazepine Usage	Patient prescribed a Benzodiazepine.
Benzodiazepine Dose >3mg	Patients on a Benzodiazepine dose > 3mg.

Registries:

1. **OBOT Registry –** Provides a method to monitor all patients enrolled in an OBOT program.
2. **Opioid Potential Misuse Registry –** Provides a method to identify people who are exposed to some level of risk around developing an addition to opioid because they have been ordered an opioid medication.
3. **Pain Management Registry–** Provides a method to monitor patients who have chronic pain.
