

# *The Impact of Trauma on Women and Girls Across the Lifespan*

**A NEW WEBINAR SERIES**

**REGISTER NOW!**

## Lifecourse Effects of Trauma in the Lives of Girls:

Findings from the Adverse Childhood Experiences Study

The impact of violence, abuse, neglect, disaster, war, and other harmful experiences continues long after the traumatic event has ended. Exposure to trauma is a pervasive issue that has significantly impacted the health and well-being of millions of Americans and nearly everyone seeking services in the public health and social services systems. Understanding how trauma affects the emotional, behavioral, cognitive, social, and physical functioning of the people we care for can improve our services.

Join us as we:

- Summarize the major findings of the Adverse Childhood Experiences Study
- Describe the prevalence of trauma in childhood
- Identify how trauma affects women and girls throughout their lives, including evidence that links trauma with profound physical, mental health, and behavioral consequences

All health and social service providers are welcome, including medical care providers, dentists, social workers, teachers, mental health workers, substance use disorder treatment providers, corrections officers, and community program staff, to name a few.

### Session 2:

Lifecourse Effects of Trauma in the lives of Girls: Findings from the Adverse Childhood Experiences Study  
Presented by: Valerie Edwards, PhD

**When: December 14, 2010**

2pm Eastern Time – 1pm Central Time – 12pm Mountain Time

Join us to learn more about how to:

- Describe the basic principles of trauma-informed care
- Describe best practices in trauma informed care
- Identify ways to integrate trauma-informed practices in service delivery
