Webinar Series:

FluFIT for Colon Cancer Screening

Fridays, 12pm - 1pm EST

May 11th	Why Should You Implement FluFIT?
July 13th	FluFIT, An Evidence Based Intervention
August 17th	Planning, Resources and Best Practices for Your FluFIT Clinic
January 11, 2019	Lessons Learned

Colorectal cancer is the second leading cause of cancer death in the United States. Most of these deaths could be prevented with routine screening. FluFIT programs increase colorectal cancer screening rates by providing a take home fecal immunochemical test (FIT) to eligible patients when they receive their annual flu shot.

Join us for these free educational opportunities to discuss the potential of increasing colorectal cancer screening rates by including FIT dissemination in a Flu Clinic setting. Target audience includes healthcare providers (physicians, nurses, medical assistants, pharmacists), human resources/benefits managers, wellness coordinators, clinical office managers & staff, quality improvement professionals and patient navigators.

Just like the FLU, COLON CANCER is PREVENTABLE and also TREATABLE and BEATABLE when found EARLY!
